GENERAL INFORMATION:

APPLICANT: Schan, Jeffrey D.

APPLICANT: Rutter, William J.

APPLICANT: Reman, Jeffrey C.

APPLICANT: The Regents of the University of California

TITLE OF INVENTION: Receptor Tyrosine Kinase With a Discoidin-Type Binding

TITLE OF INVENTION: Domain

FILE REFERENCE: 023070-079010US

CURRENT PELING DATE: 1998-08-26

FRIOR FILING DATE: 1998-08-26

FRIOR PILING DATE: 1993-06-14

FRIOR FILING DATE: 1994-08-16

NUMBER OF SEQ ID NOS: 6

SOFTWARE: PatentIN Ver. 2.1

SEQ ID NO 3

Sequence 7, Application US/08923386A

Patent No. 6169170

Patent No. 6169170

TOTHE OF INVENTION: Oligonucleotide N3'-P5'

TITLE OF INVENTION: Phosphoramidates: Hybridization and Nuclease Resistance

TITLE OF INVENTION: Properties

NUMBER OF SEQUENCES: 27

CORRESPONDENCE ADDRESS:

ADDRESSEE: Dehlinger & Associates

Sequence 3, Application US/08678039A
Patent No. 5858662
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Morris, Colleen A.
TITLE OF INVENTION: Milliams Syndrome and
TITLE OF INVENTION: Williams Syndrome Cognitive Profile by Analysis of the
TITLE OF INVENTION: Presence or Absence of a LIM-Kinase Gene
NUMBER OF SEQUENCES: 42
CORRESPONDENCE ADDRESS:
ADDRESSE: Rothwell, Figg, Ernst & Kurz, P.C.
STREET: Tower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                        ö
                                                                                                                                                                                                                                                                                        Sequence 7, Application US/08427863

Patent No. 5593834

GENERAL INFORMATION:
APPLICANT: LANE, Michael J., BENIGHT, Albert S., and
APPLICANT: FALDASZ, Brian D.
TITLE OF INVENTION: METHOD OF PREPARING DNA SEQUENCES WITH KNOWN
NUMBER OF SEQUENCES: 8
CORRESONDERCES: ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD
STREET: 60 State Street, suite 510
                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 20
                                                                                      1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 6, Application US/08763417

Patent No. 6027884

GENERAL INFORMATION:
APPLICANT: LANE, Michael J., BENIGHT, Albert S., and APPLICANT: FALDASZ, Brian D.
TITLE OF INVENTION: THERMODYNAMICS, DESIGN, AND USE OF TITLE OF INVENTION: NUCLEIC ACID SEQUENCES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0.5%; Score 17.4; DB 1;

Patent No. 6169170

GENERAL INFORMATION:
APPLICANT: GYAZINOV, Sergei
TITLE OF INVENTION: Oligomucleotide N3'-P5'
TITLE OF INVENTION: Phosphoramidates: Hybridization and Nuclease Resistance TITLE OF INVENTION: Properties
NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
ADDRESSES: Dehlinger & Associates
STREET: P.O. Box 60850
CITY: Palo Alto
                                                                                                                                                   ö

Sequence 1, Application US/08700530

Sequence 1, Application US/08700530

Patent No. 6316186

GENERAL INPORMATION:

APPLICANT: EKINS, Roger P

TITLE OF INVENTION: Binding assay using binding agents with tail groups

FILE REPERENCE: 0380-P011800US0

CURRENT APPLICATION NUMBER: PCT/GB95/00521

PRIOR PELICATION NUMBER: PCT/GB95/00521

PRIOR APPLICATION NUMBER: GB 9404709.9

PRIOR PILING DATE: 1994-03-11

PRIOR FILING DATE: 1994-03-11

NUMBER OF SEQ ID NOS: 4

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 1

LENGTH: 18

TYPE: DATE

CRANISM: Artificial Sequence

FRAUTRE:

OTHER INFORMATION: Description of Artificial Sequence:

CHER INFORMATION: Discription of Artificial Sequence:

GENERAL INFORMATION:
APPLICANT: GTYZAIOV, Sergei
TITLE OF INVENTION: Oligonucleotide N3'-P5'
TITLE OF INVENTION: Phosphoramidates: Hybridization and Nuclease Resistance
TITLE OF INVENTION: Properties ZIP: 94306-0850
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/214,599 NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dehlinger & Associates
STREET: P.O. Box 60850
CITY: Palo Alto Sequence 8, Application US/08214599 Patent No. 5599922
